## **Commercial Air Duct Cleaning**

**The A1SCS team is professional, effective and on-time!**

We can perform a thorough system cleaning without interrupting the flow of business.  
Contact us today for a **FREE Commercial Quote!**

Our team is trained, qualified and certified to maintain your system, no matter what size. We undergo continuous training, strictly adhering to industry standards. You can count on us to do the job right the first time.

Our cleaning system uses negative and positive air, simultaneously, to maximize the cleaning of air ducts, a chemical free process. This prevents the dirt and contaminants from blowing back into your office or facility during the cleaning process. We do have chemical treatments available if needed.

Your entire system is cleaned. We mean every inch air can travel within your ventilation system is cleaned. The A1 SCS process uses a combination of powerful truck mount vacuum system and high pressure air up to 220 pounds of positive air pressure pushing and brushing. The process is safe for ALL duct work.

Our chemical free system has cleaned the local hospital and college, and many offices, buildings and homes.

**A1 SCS puts a warranty on all work!**

### **Sanitizing**

We use disinfectant, a green product that safely purifies homes and businesses, creating a safer place for residence and employees. This keeps the seasonal flus at bay and those with a weakened immune system healthier.

Benefect Disinfectant is a botanical disinfectant and fungicide cleaner and deodorizer. Ideal for many applications, including grey or black water damage, mold remediation, body clean-up, carpet deodorizing and anywhere else germs or odor control is required. It is very effective on organic matter and has been used by industry leading professionals since 2000. Benefect is EPA registered as a 'No Rinse, No Wipe' product. Just spray and walk away. There are no warning labels or precautionary statements for use or disposal.

We spray Benefect into the air system after we clean. It kills mold, bacteria, and odor.  
Do the job right... the first time and *breathe better!*
